1. What it is

A structured nursing and clinical care plan template. One row per identified patient problem: the problem, the goal (measurable, time-bound), the interventions, the responsible person, and the review date. A care plan that says "improve nutrition" is not a care plan — it has no goal, no timeline, and no owner. This template forces specificity: "Patient will achieve unaided oral intake of 1200 kcal/day by Day 5 — dietitian review on Day 3."

2. ASF criterion

Evidence for: **Hospital Standard 4, criterion 4.9** (Non-Negotiable) — There's an Actual Care Plan.
